

MOHD SALIM UDDIN

NetSuite Technical Consultant

Email: mohammed.salim9515@gmail.com | Phone:9182399280 | Hyderabad, India -500008 | LinkedIn:<https://www.linkedin.com/in/mohdsalim95>

Summary

- NetSuite Technical Consultant & SuiteScript Developer with 3+ years of hands-on experience designing, developing, and delivering custom NetSuite solutions across Finance, Operations, and Project Management domains. Proficient in SuiteScript 2.x/2.1 (Client, User Event, Map/Reduce, Suitelet, RESTlet, Scheduled), SuiteCloud Development Framework (SDF), SuiteFlow, SuiteTalk, and SuiteQL. Experienced in building React-based Suitelet SPAs, REST API integrations, and end-to-end automation spanning Procure-to-Pay (P2P) and Order-to-Cash (O2C) business processes.
 - Recently delivered a full-featured Timesheet Management SuiteApp using SDF encompassing React-based time entry UI, SuiteScript 2.x server scripting, SuiteFlow approval workflows, and SuiteQL -driven reporting reducing weekly timesheet processing effort by 70% and approval cycle time from 3 days to same-day.
 - Proven track record of translating complex business requirements into scalable, user-friendly NetSuite solutions. Skilled in stakeholder collaboration, solution design, and delivering measurable operational improvements across finance automation, inventory management, revenue recognition, and project cost tracking.
-

Skills

- **SuiteScript & SuiteCloud:** SuiteScript 1.0 / 2.x, Client Script, User Event Script, Map/Reduce Script, Suitelet, RESTlet, Scheduled Script, SuiteCloud Development Framework (SDF), SuiteCloud CLI, SuiteBuilder, SuiteFlow (Workflow), SuiteTalk (REST), SuiteQL, SuiteAnalytics
 - **NetSuite Modules & Features:** Custom Records, Custom Fields, Custom Forms, Saved Searches, Reports, Advanced PDF/HTML Templates, Role & Permission Management, Procure-to-Pay (P2P), Order-to-Cash (O2C), Revenue Recognition, Inventory Management, Project Management, Advanced Budgeting, Time & Expense
 - **Integration & APIs:** REST API, SOAP API, RESTlet-based Integration, Token-Based Authentication (TBA), OAuth 2.0, JSON / XML Data Handling, CSV Import / Export, Real-Time Data Synchronization, Third-Party API Integration
 - **Front-End Development:** React.js, JavaScript (ES6+), HTML5, CSS3, React SPA inside Suitelet, Dynamic UI Components, Client-Side Validation, Excel Export (SheetJS / XLSX)
 - **Back-End Development:** Java, SuiteScript Server-Side Processing.
 - **Business Processes:** Procure-to-Pay (P2P), Order-to-Cash (O2C), Revenue Recognition (ASC 606), Financial Close Automation, Inventory Adjustment & Transfer, Project Cost Tracking, Timesheet & Resource Management, Approval Workflow Automation
 - **Tools & Project Management:** Git, Jira, SuiteCloud IDE, Postman (API Testing), Microsoft Excel, Chrome Extension Development
 - **Certifications** Oracle NetSuite Certified AI Foundations Associate, Oracle NetSuite Certified BI and Reporting Associate, Oracle NetSuite Certified Financial Associate
-

Experience

MindSuite Informatics Private Limited

NetSuite Technical Consultant | Feb 2022 – Present

Deliver end-to-end NetSuite technical solutions across finance, operations, and project management domains. Specialize in SuiteScript 2.x/2.1 development, SuiteCloud Development Framework (SDF) implementations, React-based Suitelet SPAs, and REST API integrations.

Timesheet Management SuiteApp (SDF)

- Architected and delivered a Timesheet Management SuiteApp using SuiteCloud Development Framework (SDF), enabling unlimited user time entry without requiring additional NetSuite user licences — delivering significant licensing cost savings for clients with large workforces.
- Built a React-based Suitelet SPA with dynamic weekly/monthly time entry grids, project-task-resource hierarchy, inline editing, real-time validation, and Excel export for payroll and billing reconciliation.
- Implemented Map/Reduce scripts for bulk timesheet processing, SuiteFlow approval workflows for multi-level review, and SuiteQL-powered reporting — reducing approval cycle time from 3 days to same-day and cutting weekly processing effort by 70%.

Advanced Budgeting & Procure-to-Pay (P2P) Automation

- Architected an end-to-end P2P automation solution covering fund requests, multi-level budget approvals, PO authorization, and utilization tracking via SuiteFlow workflows and custom SuiteScript logic — reducing procurement cycle time by 50%.
- Enforced real-time budget threshold validation using User Event Scripts, triggering automated overage alerts and ensuring full audit trail compliance for finance governance.

Finance & Operations Automation

- Automated journal entry generation, loan processing, and operational workflows using SuiteScript (Client, User Event, Map/Reduce, Scheduled Scripts) — reducing manual finance effort by 30% and cutting loan processing time from hours to under 5 minutes.
- Integrated NetSuite with external systems via RESTlet APIs using Token-Based Authentication (TBA), reducing manual reconciliation by 35% and improving data sync from daily batch to near real-time (under 5-minute cycles).

Projects

Timesheet Management SuiteApp (SDF)

- Architected a full-featured Timesheet Management SuiteApp using SuiteCloud Development Framework (SDF), enabling unlimited user access to time entry without requiring additional NetSuite user licences — delivering significant licensing cost savings for clients managing large, non-NetSuite-licensed workforces.
- Built a React-based Suitelet SPA with dynamic weekly/monthly time entry grids, project-task-resource hierarchy, inline editing, client-side validation, and real-time hour tracking across multiple projects simultaneously.
- Implemented dirty row tracking at cell level for weekly timesheets — only modified rows and specific days are sent to server on save, minimizing unnecessary NetSuite record updates
- Built bulk approval and employee access management modules for admins, with filterable/searchable lists, inline edit/create modals and real-time selection summaries
- Built **admin dashboard** with project breakdown donut chart, daily trend line chart and employee productivity metrics with date range filters, and **employee access control** module to manage employee accounts, roles and system access with inline edit/create modals
- Applied React performance optimizations using useMemo, useCallback, React.memo, ref-based drawer navigation and TabCacheProvider context pattern to preserve state across tabs and prevent unnecessary re-renders

Work Breakdown Structure (WBS)

- Designed and delivered a React-based WBS Suitelet SPA within NetSuite, replacing a disconnected Excel-based project cost tracking process across multiple project teams.
- Implemented dynamic parent-child cost hierarchies with inline editing, real-time budget rollup calculations, and tab-based navigation; built a KPI dashboard powered by Suitelet APIs surfacing budget variance, burn rate, and cost-at-completion metrics in real time.
- Reduced project cost visibility lag from weekly manual reports to real-time, saving project managers 5+ hours per week per project.

NetSuite API Integration

- Designed and deployed RESTlet-based APIs connecting NetSuite with external platforms including Power BI, Salesforce, and Reachware Studio — enabling real-time bidirectional synchronization of sales orders,

inventory levels, and customer records using Token-Based Authentication (TBA) and rate-limit-aware retry logic.

- Exposed NetSuite financial and operational data to Power BI for live executive dashboards, synchronized customer and opportunity records with Salesforce CRM, and integrated Reachware Studio for real-time inventory and transaction data exchange — eliminating siloed reporting across all three platforms.

Inventory-Store SuiteApp:

- Designed user interfaces and automated inventory adjustments, purchase requisitions, and transfer orders in NetSuite, reducing user effort. Built a Suitelet-based inventory count entry system integrated with a Map/Reduce backend for structured adjustments, automated approvals, and accurate stock tracking.
- Built automated SuiteFlow approval workflows for structured inventory adjustments, eliminating manual approval routing and improving stock tracking accuracy across warehouse operations.

Certifications

- Oracle NetSuite Certified AI Foundations Associate.
- Oracle NetSuite Certified BI and Reporting Associate.
- Oracle NetSuite Certified Financial Associate.

Awards & Recognition

- *Silent Soldier Award* – Recognized for consistent behind-the-scenes contributions, reliability, and dedication to delivering high-impact technical solutions with minimal supervision.

Education

- Shadan College of Engineering & Technology - 2018-2022
B.Tech – Computer Science
